

DESIGN HIGHLIGHTS

- Quiet smooth action at approximately 40mm [1.6] per second
- Full cable management
- Wide range of mounting options
- 24V DC motor. Suitable for direct DC supply
- Marine suitable robust beam

OPTIONS

- Box Enclosure
- Push Flap
- Custom screen back cover
- Heavy duty option
- Outdoor Option

WARNING

It is the responsibility of

the installer to warn all

potential end users of

the dangers of interfering

with mechanisms during

operation

Mechanisms which lift or move weights need to be checked on a yearly basis for any damage which may result in an accident

Technical Sheet

ISSUE 003 SHEET 1 of 8

FUNCTION

An electric mechanism to lift a flat screen television. Suitable for marine use. Shown here for use with an Electric Flap Actuator

SUITABILITY

Suitable for a total lifting weight of 25Kg [55lbs] or 16Kg [35lbs] in a marine environment.

Maximum screen height 539mm [21.2]

Lift systems to suit different screen heights and weights are available

SPECIFYING

Check screen mounting details and request a suitable mount plate

CONTROL

Supplied with basic infrared remote. Can be learnt by many learning remotes.

Also has switch control and RS232 so can be operated by relays, switches, Crestron / AMX or Lutron systems.

Design Highlights

A space efficient and robust lifting mechanism, suitable for use in marine environments.

A robust 24V DC motor with a purpose made lead screw enables a quiet and smooth lifting action at approximately 40mm [1.6] per second.

A high precision linear guideway ensures stability and durability of the beam to prevent any unwanted movement of the screen.

Adjustable UP and DOWN positions allow for a precise final setup within the cabinet.

Full cable management protects all screen and power cables from damage and is easily accessible for future changes to the AV setup.

A wide range of mounting options are available to suit different screens and speaker arrangements.

The Electric Flap Actuator eliminates the need for a lid or box to be mounted around the screen.

Cable Routing

Screen cables are routed behind the Base Panel and out the right side of the Beam into the Cable Track. Cables must be routed carefully to prevent any interference with the LSL beam as it operates.

Screen and Mechanism cables should be routed to a control box in the bottom of the cabinet.

DETAIL B

Mechanism Down - In Cabinet

IMPORTANT: Thicker cabinet tops will require a reduced maximum screen height

Base Panel and Flap Panel Details

Flap depth dimensions are based on a 3mm thick piano hinge Required flap dimensions may vary dependant on the hinge used EFA Fixing Plate-EFA Push Rod A step is required in the front of the Flap to meet a step in the front edge of the Cabinet Aperture-Recess for EFA Fixing Plate-[0.3] <u>R8</u> [2.5] 64 Flap Panel Width = Cabinet Aperture Width - 6mm [0.25]

LSL EFA 2 - Lift System Light with Electric Flap Actuator **Technical Sheet**

Positioning the EFA to Accommodate Smaller Screens

A Base Panel of less than 1050mm [41.3] wide will cause the EFA to interfere with the LSL beam.

This can be avoided by orientating the EFA away from the LSL. It will however require more space for the EFA to be positioned to the side of the cabinet.

Overall Mechanism Dimensions MECHANISM - UP POSITION [7.9] 200 [7.9] 200 **MECHANISM - DOWN POSITION** 2 9 9 9 9 9 9 9 9 9 9 9 9 9 9 9 [27.2] 690 [27.3] 694 Back Plate Height [3.5] 89 [5.1] 130 60 [14.2] 362 [9.2] 233
